Mars: What Isn't NASA Telling Us?: Facts And Questions About The Red Planet, Panspermia, And Humans (Unexplained Mysteries)

Synopsis

What Isn't NASA Telling Us? Since the beginning of time, man looked up into the sky and saw the red planet. We drew pictures of Mars on cave walls, we wrote songs, and we built complex structures to map it in the sky. Humans are drawn to Mars. Call it an obsession, or an attraction, or a quest for knowledge, humankind has always been drawn to Mars. Facts and Questions about the Red Planet, Panspermia and Humans Have you ever wondered why humans are the only mammals to suffer from skin cancer? Is it possible we evolved on a planet where the sun was much weaker? Why haven't any of the rovers gone to any of the pyramid-like formations? Mars: What Isn't NASA Telling Us? Grab your copy now and don't forget to claim your bonus video in the conclusion!

Customer Reviews

There are so many holes in the authors thinking that I couldn't begin to cover them all. My favorite is how humans aren't adapted to live in sunlight. Let's forget for a minute that whole vitamin D thing which took who knows how long to evolve. The author completely glosses over the fact that up until recently our ancestors were covered in hair. We lost our fur coats in the blink of an eye, in evolutionary terms, so I see no conflict with the fact that our skin hasn't caught up yet. The author also claims that

humans are the recipients of 223 extra, 'alien' genes. Well I googled the issue, and sure enough, I got tons of hits saying that this is indeed so. Unfortunately, it's the quality of the hits that...um...smell of bovine fecal matter. If you look at sites that deal exclusively with the SCIENCE of genetics, you don't find much support for this notion....and no, I don't see a conspiracy of silence here. Anyway, that's my take on this book. I got it through KU, so I don't feel ripped off, but I can't possibly recommend it.

Get your tin foil hat ready if you are going to read this book. It glibly states some controversial theories as facts such as the claim that alien bacteria were grown in the Allen Hills meteorite. (Most likely Antarctic soil bacteria by the way). I have no issue with crazy theories. Who knows some of the theories presented may yet have a grain of truth in them (unlikely in this reality). My issue with it is that it glibly pronounces all of this stuff as fact. It mixes Erich von Däniken style pyramids on Mars and the ancients met our ancestors, Not sure if the author is claiming that all Earth life comes from Mars or just humans. By all means write a conspiracy book but at least craft it as a series of unanswered question rather than serious facts. Poor effort

If you are interested about the red planet which is Mars? Then this book will give you insights about it. NASA have so many secrets in it and they do not share it to the world. There are so many unexplained mysteries about. For sure, within you there are so many questions that you wanted to ask. In this book we are going to learn many things. Such a wonderful book for everyone to read and gain knowledge.

This is a great book because it states why some people like the author believes that the first home of human is the Mars. Just want to know the facts and differences they are telling. I still don't believe this because God says that the real and the only home for us people is the planet Earth. Some facts are true in this book :) I enjoyed reading this. But still Earth is the best planet :)

This Book reveals about the secrets and many theories made my NASA. This book try to convince about MARS being human's first Home. Some of the popular facts like Did life begin on Mars and than evolve to Earth, History of Panspermi, Why NASA refuses to tell us why the Mayans validate life origin in mars, The alien theory and many more. Nice and interesting read.

I love to dismiss conspiracy theories but the arguments and discussion in this book have converted

me into a believer that NASA aren't being honest what they release to the public about Mars. Read this book to find out the truth about Mars

What Isn't NASA Telling Us? This is such an intriguing question. This made me more interested in grabbing this book. Mars has always been a mysterious subject that has been challenging the minds of people nowadays. There is always that thing that draw us to Mars. This book has further explained "it." This book will excite anyone's curiosity and will trigger his imagination. Very effective.

I enjoyed this short essay and could not dispute that microbes or at least organic base material could be transferred from Mars to Earth by meteorites. It would be a stretch though for me to believe that essential borax was mined on Mars and transported by 20 mule-team wagons driven by old Mayans. Still, it's a strange world; who knows. Again, this was very entertaining, my thanks to the author.
