Planet Mars: Story Of Another World (Springer Praxis Books)

Synopsis

This book gives a new insight of Mars by adopting an original outline based on history rather than on subtopic (atmosphere, surface, interior). It focuses on the past and present evolution of Mars and also incorporates all the recent results from the space missions of Mars Express, Spirit and Opportunity. This book goes to the heart of current planetological research, and illustrates it with many beautiful images. The authors describe the magnificent scenery on Mars. The authors introduce a new world and reveal the workings of the planet Mars, and they describe current research to prepare for future missions to Mars.

Book Information

Series: Springer Praxis Books

Paperback: 229 pages

Publisher: Praxis; 2008 edition (December 12, 2007)

Language: English

ISBN-10: 0387489258

ISBN-13: 978-0387489254

Product Dimensions: 6.9 x 0.6 x 9.8 inches

Shipping Weight: 1.4 pounds (View shipping rates and policies)

Average Customer Review: 5.0 out of 5 stars [See all reviews](#) (5 customer reviews)

Best Sellers Rank: #1,202,280 in Books (See Top 100 in Books) #86 in [Books > Science & Math > Astronomy & Space Science > Comets, Meteors & Asteroids](#) #107 in [Books > Science & Math > Astronomy & Space Science > Mars](#) #1189 in [Books > Textbooks > Science & Mathematics > Astronomy & Astrophysics](#)

Customer Reviews

Planet Mars Story of Another world is one of my favorite Mars books. As an amateur astronomer for 40 years and a Mars Society member I have read many books on Mars(see my other reviews for a few more Mars books). This book is quite remarkable. Its NOT a kids book but is an easy read. No heavy math.Originally published in French the English translation is perfect. No mistakes. The authors Francois Forget, Francois Costard are highly respected scientists and professor Philippe Lognonne is well know in his field. The French book edition won the 2004 Grand Prix du Livre Scientifique d'Orsay.It not a coffee table picture book but half of the 224 pages are fantastic quality pictures of Mars sites by different spacecraft and rovers and excellent drawings describing what the authors are saying. One of the best books that illustrates exactly what the author is saying. The

descriptions and writings of the various subjects are well written and packed with information. For me a quality picture or drawing of scientific information is always helpful. The 5 parts of the book are listed by the age of Mars starting with its origin and ending with man exploring Mars. Much information and pictures are given tracing the past flowing of liquid water on Mars. Mars weather is discussed. Both Mars moons are described. Many many topics are talked about and these topics are richly illustrated. At the end of the book Dr Robert Zubrin's "Mars Direct" approach is talked about. The lower cost way to send 4 people to Mars using preexisting technology and have them explore Mars for 1 1/2 years. . Definitely the way to go. (Read Dr Robert Zubrin's The Case for Mars 5 stars). Its rare to give ANY book a 5 star plus rating on both the writing and illustrations.

These three French scientists have written the near perfect 'popular' science booka delight for the enquiring layman and cognoscenti alike. The exploration of Mars over the past 50 years is undoubtedly one of the miracles of the modern age. Within a human lifetime Mars has gone from an image of a blurred blob in a telescope to a truly mind-boggling tale of discovery and knowledge, and this book has brilliantly summarized this explosion of understanding - replete with illuminating illustrations and photos. Sure, there are dozens of books on the subject, but nothing I have come across compares with this beautifully conceived and richly informative book - an A to Z from the planet's earliest genesis right through its brutal history to the present. Every conceivable aspect of our knowledge is presented here: rivers, seas, mountains, climate, chemistry, volcanoes, canyons etc and the still to be resolved possibility of life. By comparison, Roving Mars (Steve Squires) catches the thrill and challenge of the MER project, Postcards from Mars (Jim Bell) has some wonderful images but without any useful text, Mars 3-D (Bell) is just a gimmick, and Landscapes of Mars (Gregory L Vogt) is just thrown together with near asinine text and hand-trimmed photos?: who would have believed in 2008 a mainstream publisher would still be producing graphics non-digitally?, and Destination Mars (Rod Pyle) which is fine as a chatty account of the history of Mars exploration, but lacks any serious insight into what we know about this planet. The only real exception and worthy contender is Ken Croswell's Magnificent Mars - still a milestone of very knowledgeable, crafted writing with great presentation.
