## Customer Reviews

I like the Max Axiom books. The info is clear and the comic book approach is a winner with visual learners. To be clear, these are nonfiction and they cut right to the chase. Too often authors try to cram everything about a subject in and lose the kids to boredom in the process. These offer the right amount of info as a jumping off point to some hands on exploration. I gave them 4 stars because the paperback binding won't stand up to a ton of uses. You may want to opt for the hardback binding which is a bit pricey. Not enough of a flaw to miss the books for, if your kids like comics. I checked one out at the library and was suitably impressed to buy our own.

I purchased the entire series of these books for my first grader son after he found one at the local library. They are an easy to read graphic novel format with the same look as superhero comics. Using bright colors, action scenes and simple language they explain some basic scientific concepts

in a way that children can not only understand but enjoy. As I hoped they got my son interested in knowing more about the topics. Definitely worth the money and fun to read even for adults unfamiliar with the topics themselves.

I bought this book to use with my 3rd grade class and used it in a small group setting as part of a unit on light. They were immediately excited by the bright and vivid illustrations. They were so excited to learn about the light-related phenomena included in this book (shadows, reflection, refraction, and the spectrum. This a great book. The content is clear and difficult concepts are well illustrated to make them more comprehensible.
