# College Algebra With Trigonometry (Barnett, Ziegler & Byleen's Precalculus Series)

## Synopsis

Barnett, Ziegler, Byleen, and Sobecki's College Algebra with Trigonometry text is designed to be user friendly and to maximize student comprehension by emphasizing computational skills, ideas, and problem solving as opposed to mathematical theory. The large number of pedagogical devices employed in this text will guide a student through the course. Integrated throughout the text, students and instructors will find Explore-Discuss boxes which encourage students to think critically about mathematical concepts. In each section, the worked examples are followed by matched problems that reinforce the concept being taught. In addition, the text contains an abundance of exercises and applications that will convince students that math is useful. A MathZone site featuring algorithmic exercises, videos, and other resources accompanies the text.

## Customer Reviews

Only a couple of problems from each section are listed in the back of the book, in an attempt to swindle you into a purchase of the solutions manual. The problems do not reference any examples, and the text is sometimes worded poorly. If you don't have to purchase this text for school, don't.

This book is new and in good condition. However, I did not realize that it was an instructor version. It is okay if your student's teacher doesn't care about that and your student would not cheat to look at the answers. The price definitely beats the school bookstore price.

This book was just what my son needed for his college course. It was such a deal to find versus paying so much for this textbook on the college campus. Thanks for providing a cost efficient option.

Awesome book on trigonometry one of the best books on the subject. Covers everything in a well balanced manner to suit all

Great
