I had to buy this book for a statistics class I am taking for my masters. Math and statistics overall have not been the strongest courses for me so I was concerned I may have difficulty with the material. The book was very well laid out and there are a series of videos that go along with each section of the book that are offered by Pearson. They are at a separate website.(My Stat Lab which apparently is supposed to be a separately purchased product although my school had the videos available by themselves through Blackboard- So if your school uses Blackboard check with your instructor. This is one thing I loath about Pearson, they charge you 150.00 for a book then want more for stat lab. If you get the e version to begin with through Pearson you only have access to it for so long then it is gone. It also is a pain to read online. I do not recommend using Pearson's online site for the book if you can avoid it, I used it for my economics class and it was a major

hassle) If you do want it then I recommend the loose leaf 12th Edition of this book that comes with the stat lab access and ebook which is about another 20-30 dollars. This book is heavy which can make lugging it around a hassle. With the loose leaf at least you can pull the chapters you want to carry around with you more easily.The hardcover book also comes with a disk that includes stat disk and has all of the tables for the various exercises loaded in the back of the book. (I bought mine new so I don't know if you can be sure you will get it with a used book) I intend on keeping this book for the long term as an excellent resource. Between the stat disk, excel and a decent calculator you can manage all of the formulas and exercises in the book. There are exercises for each section and at the end of each chapter.
