God's Undertaker: Has Science Buried God?

Synopsis

Intended to provide a basis for discussion, this captivating study evaluates the evidence of modern science in relation to the debate between the atheistic and theistic resource addresses such topics as the origin of life; the genetic code and its origin; the nature and scope of evolution; and the scope and limits of science. Gripping and thoroughly argued, it is an illuminating look at one of man's greatest debates. This updated edition features 10 percent new content and a brand new forward from the author.

Book Information

Paperback: 224 pages

Publisher: Lion Hudson; New updated edition edition (September 1, 2009)

Language: English

ISBN-10: 0745953719

ISBN-13: 978-0745953717

Product Dimensions: 5.5 x 0.7 x 8.5 inches

Shipping Weight: 12.3 ounces (View shipping rates and policies)

Customer Reviews

John Lennox, who teaches mathematics and philosophy of science at Oxford University, comes out of the closet as a "creationist" (some will say) in this incisive and readable book. That is to say, not only does he place theoretical limits on the "magisteria" of science, he also finds positive empirical limits to what physics and biology can in fact explain about our strange, glorious, troubling cosmos. I haven't read Lennox' previous books, so I don't know how far he has gone this way before, but it seems a gutsy move. (When he begins the section on biology, aware of the acrimony that has surrounded the evolution debate, he taps out his own tongue in cheek epitaph: "Here lies the body of John Lennox . . .") Oxford was once the home of Wesley and Boyle and Lewis, but Richard Dawkins casts a shadow there now -- one member of the science faculty told me maybe 60% of his colleagues agree more or less with Dawkins, whether they've read him or not. And unlike Alister McGrath (who however has the class and good taste to recommend this book), Lennox is more in

the Intelligent Design camp than "theistic evolution" or "biologos." But the term "camp" here is misleading: to Lennox, the search for truth seems less a "darwinian" competition between fortified and hostile foes lobbying shells at one another, but as a genial and informed dialectical journey among pilgrims. The book covers all the main questions: the nature of science, origin of the universe, anthropic "coincidences," origin of life, mutations, fossils. Lennox dialogues with Dawkins, as one would expect, and with many leading scientific thinkers. The prose is clear as a mountain creek tumbling over stones. The main weakness of the book, in my view, has to do with Lennox' discussion of Intelligent Design.

After reading *The God Delusion* a year ago I became gripped and eventually spellbound by the God vs. no god debate that seems more and more to be occupying the collective attention of our culture. In my desire to gain a fuller understanding of both perspectives, I've since immersed myself in the most popular literature on the subject (penned by Harris, Dawkins, Hutchings, Davis, Flew, McGrath, Collins, DeSuza etc.). The arguments and lines of reasoning expressed in John Lennox's book entitled "God's Undertaker" are, by far, the most deep and insightful I've read on the subject to date. Lennox begins *God's Undertaker* by making a critical distinction between science and materialist/naturalist philosophy that, in and of itself, provides a resounding response in the negative to the question posed in the book's subtitle (Has science buried God?). Lennox explains that science in an uncontaminated form seeks exclusively to explore the universe by examining its physical properties and apparent laws without making claims about what might or might not exist beyond its own domain. Science therefore neither rules out nor affirms the existence of the supernatural. Naturalism, on the other hand, is philosophically bound to a preconceived notion regarding the nature of reality; namely that it is limited exclusively to the substantial and, consequently, that truth can only be found through an examination of material phenomenon. In short, it is naturalism, not science, which is at odds with theism.
